

AI-Assisted Ticket Workflow Management System Solution Architecture

High-Level Architecture showing users, workflow engine, AI services, integrations, data layer, reporting, and AI monitoring.

Key Capabilities Covered

- End-to-end ticket lifecycle management
- AI-driven ticket categorization and prioritization
- Intelligent routing and SLA breach prediction
- Integration with enterprise systems and collaboration tools
- Centralized reporting and executive dashboards
- Continuous AI monitoring, drift detection, and governance
- Scalable architecture supporting future AI enhancements
